

Xylitol can help keep them smiling!

100% Natural

Xylitol (pronounced Zyl-it-ol) is a 100% natural sweetener without the side-effects of sugar and artificial sweeteners.

Found naturally in fruits like strawberries, raspberries and plums, and trees such as birch, xylitol is also produced in our own bodies.

Spoon for spoon as sweet as sugar, xylitol leaves a fresh, sweet taste lingering in the mouth, and is safe - World Health Organisation and Food Standards Australia approved.

Studies also show that xylitol has significant benefits in reducing tooth decay and ear infections in children. It will not raise insulin levels, has 75% less available carbohydrate than sugar, and has a glycaemic index of only 7 compared to 100 for sugar.

Xylitol has received positive support in the Journal Of The American Dental Association. "Xylitol is an effective preventive agent against dental caries... "

Consumption of xylitol containing chewing gum has been demonstrated to reduce caries in Finnish teenagers by 30-60%. Studies conducted in other countries have shown similar results....

A study conducted at Harvard School of Dental Medicine concluded that: "Xylitol can significantly decrease the incidence of dental caries."

Delicious, 100% natural sweetener

Tastes like sugar - but better!

Fights & prevents tooth decay

Helps prevent ear infections in children

Prevents carbohydrate mood swings

Provides a slow & steady release of energy

Ideal in special diets

Freshens breath

British Dental Journal
Vol 194 April 2003:
"Xylitol and caries
prevention - is it a magic
bullet?"
